

## **Genome Technology Core at Whitehead Institute**

**Thomas Volkert** (volkert@wi.mit.edu), Whitehead Institute, **Thomas Volkert**, Whitehead Institute

Located in the heart of Kendall Square, the Genome Technology Core of the Whitehead Institute has been innovating on the cutting-edge of genomics technology for over 20 years. We provide service and support for several popular platforms including Illumina NGS on the NovaSeq, 10X single-cell profiling, Real-time PCR and the Nanostring Sprint. We support all aspects of the NGS workflow including RNA/DNA extraction, library prep, sequencing, and data processing. This poster will summarize our capabilities and resources and hopefully inspire communication and collaboration with other cores around the world.
